

Performance Optimization Manual

The performance of the browser maybe decrease if you use slow network volumes (i.e. a NAS) or slow USB devices.

You can optimize the general access by disabling the following three options:

1. Uncheck the option „Create custom enclosing folder icon“ in the preferences Browser/General.

☐ Create custom enclosing folder icon

2. Uncheck the option „Support Spotlight Comment“ in the preferences General/Misc.

Enable: ☐ Support for Spotlight Comment

3. Uncheck the option „Automatic Volume Discovery“ in the preferences Browser/Display.

Enable: ☐ Automatic Volumes Discovery

Also, please modify the iPhoto and Aperture library settings if you moved them from the internal system disk to an external network device.

You can access this settings in the preferences Browser/Libraries.

Also, active antivirus software can **reduce** the file access speed **a lot**. So, please disable the antivirus software or change the scan settings.
